

Buildings For Our Future The Deep Path for Closing the Emissions Gap in the Building Sector

The GBPN

June 2013

With the goal of addressing climate concerns through lower carbon use, *Buildings for our Future - The Deep Path for Closing the Emissions Gap in the Building Sector* shows that ambitious improvements in the energy performance of buildings can reduce their CO₂ emissions by one third by 2050. The technology is there but policy priorities need re-setting and there must be a more concerted effort to learn from, and apply best practice policies to deliver this significant mitigation potential from buildings. This report sets out the necessary steps towards a deep market transformation and opens a new dialogue on the role and importance of improved energy performance of buildings in today's global and national discussions about energy and climate change policies.
